

Adding the ePrint-LAW printer driver to Mac OS X

Open the Safari web browser and go to the Law School web site page for student software downloads.

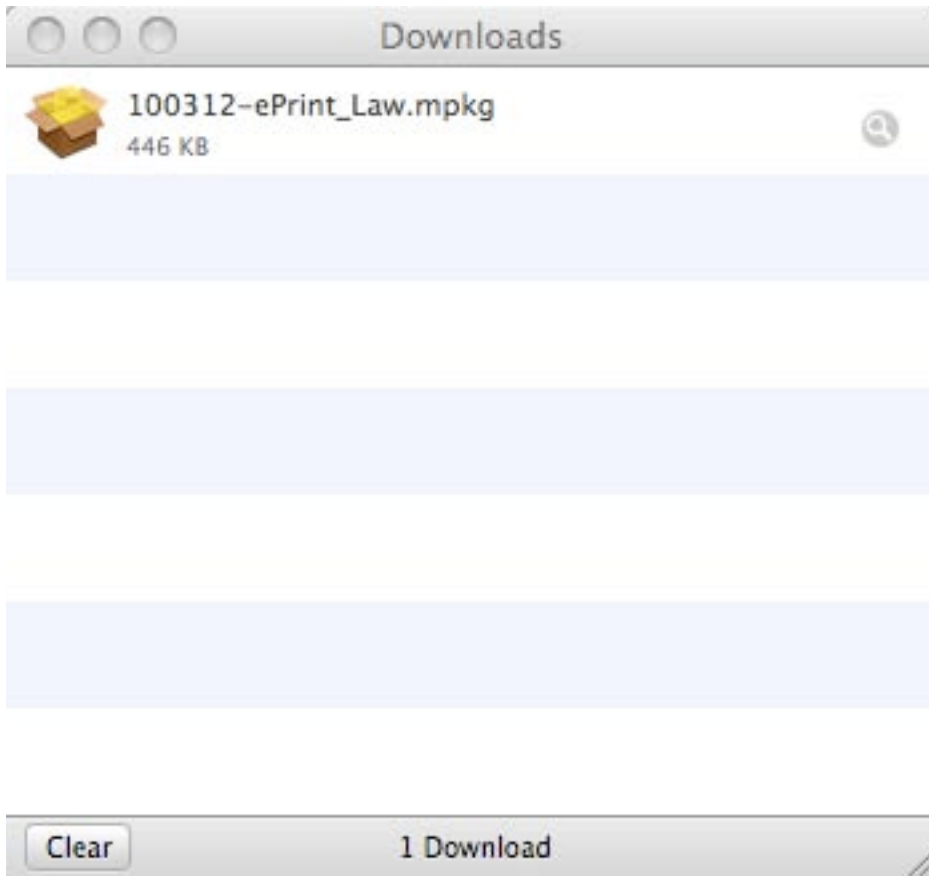

<http://www.law.duke.edu/computing/download/downloadlist>

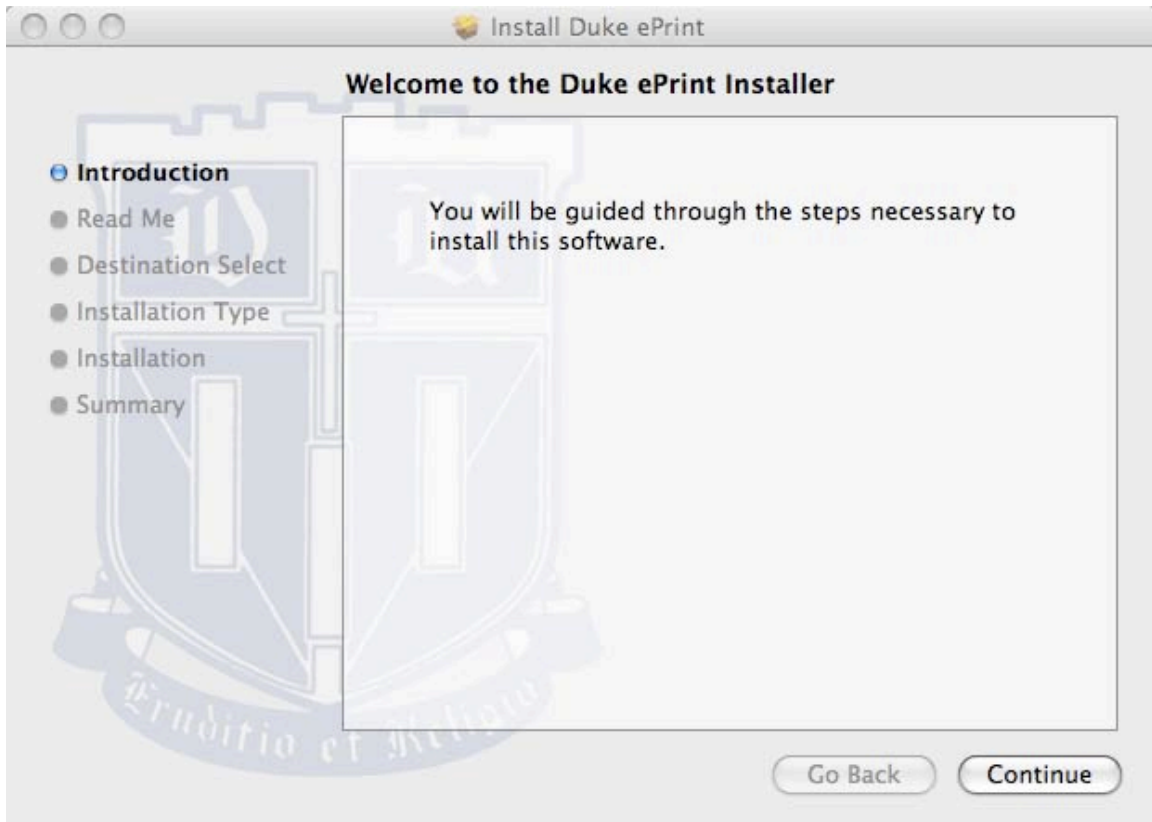

Select the download for the Law School ePrint Driver for Mac OS X. You will be prompted for your LAWID and password.

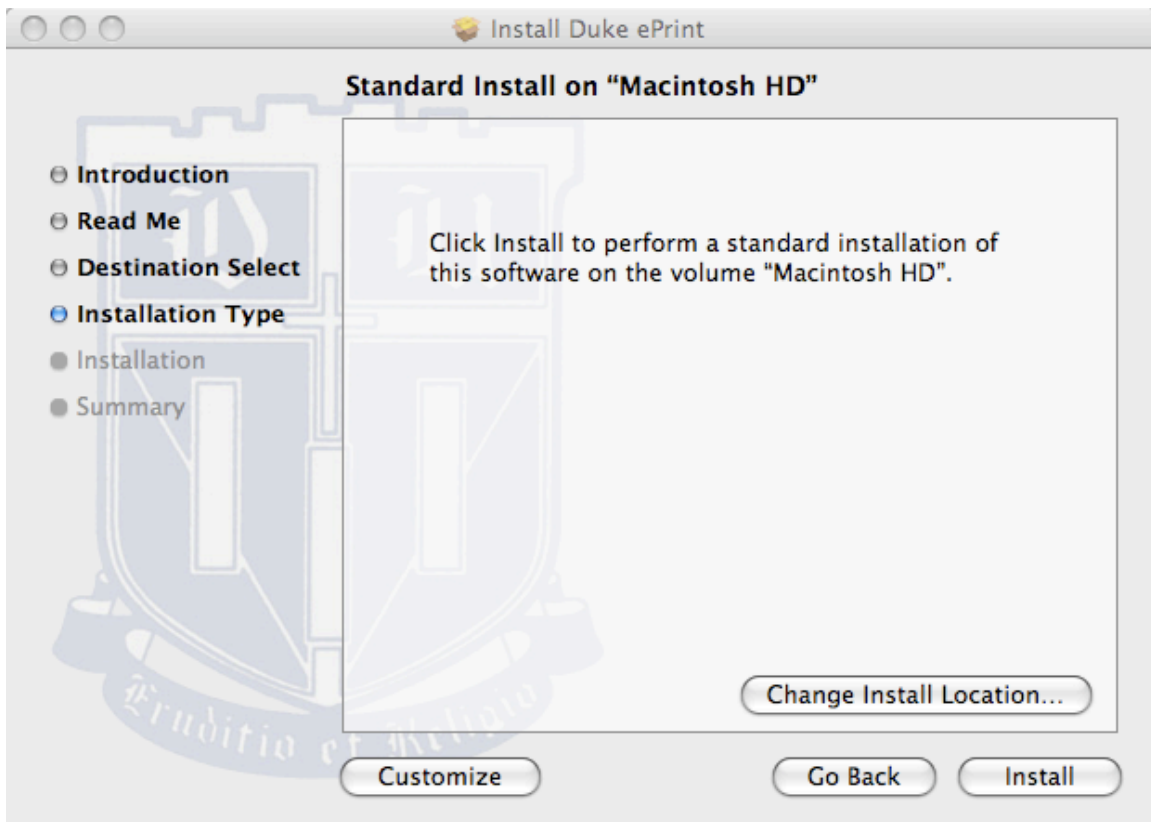

After entering your authentication information, you will be directed back to the download page. Again select the Mac OS X ePrint Driver download, and you will download a ZIP file that contains the software package.

The package file will be automatically unzip'd and start the installer, if it does not auto-start, please double click the download to initiate the installation process.

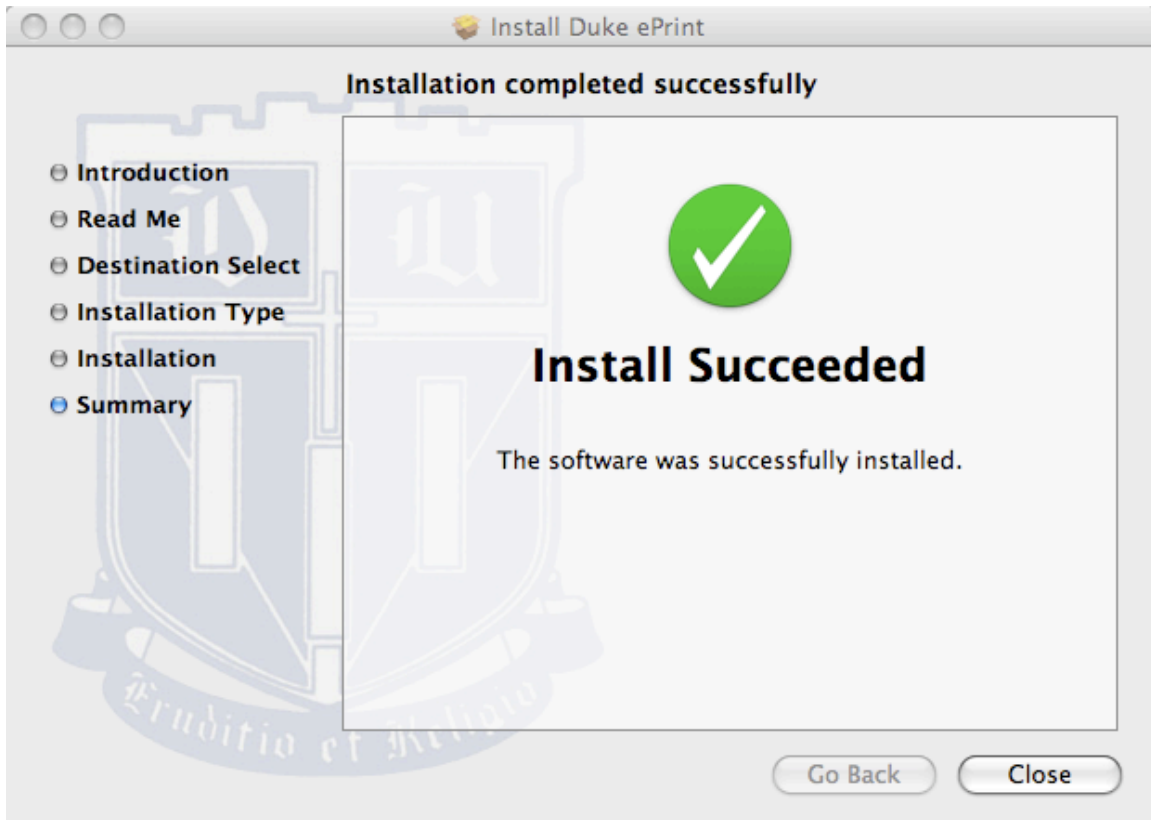

Please press CONTINUE for the first two screens and INSTALL on the third screen.

You will be prompted for your computer password to complete the installation process. Please enter your computer password and press OK.

Once the installation has completed, you should see a confirmation page and you can close the installer.

You can now verify that you have the ePrint_LAW printer from the System Preferences screen.
